— Clinton Maynard in St George Hospital after the incident

Sydney man Clinton Maynard has been hospitalised in a critical condition following an accident mixing chlorine for his backyard swimming pool.

He was preparing to correct the water of his aboveground pool with a shock treatment, following advice from his local pool shop after the pool had gone green.

On the advice of the retailer, he used two kilograms of stabilised granular chlorine and premixed it with water.

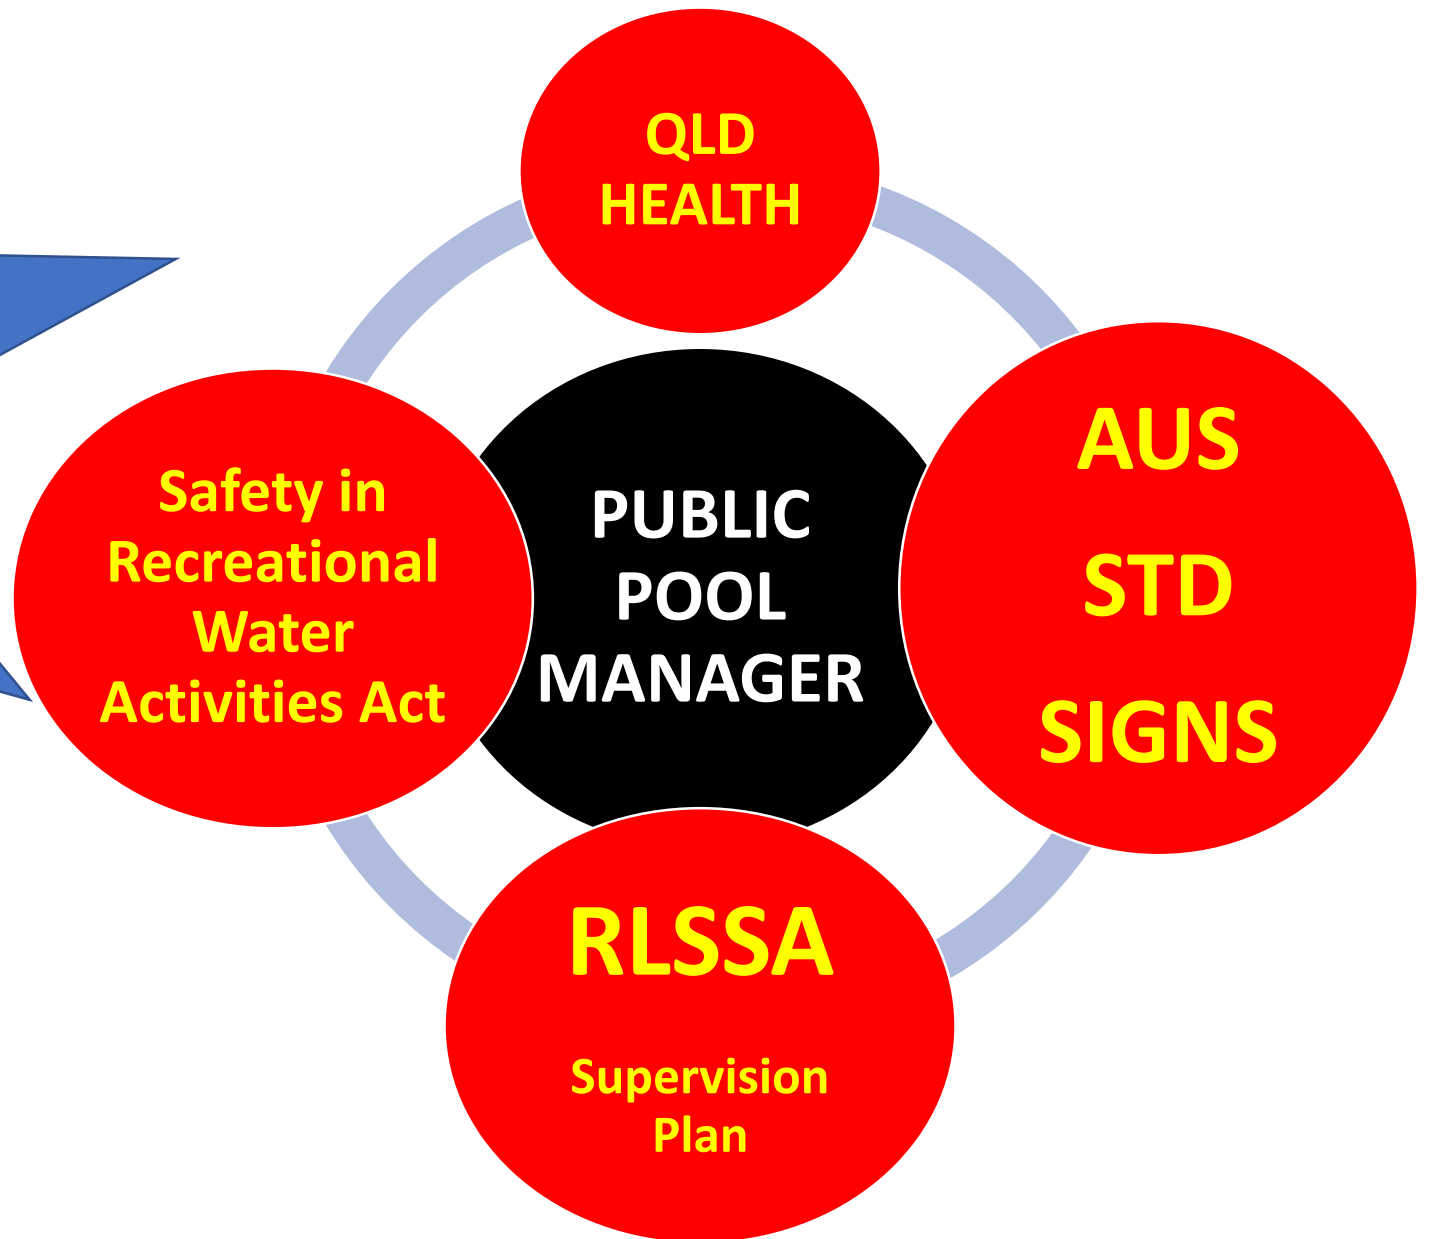

He used a bucket that was reserved only for mixing chlorine, and had never been used for other chemicals.

However, he was never told to put the water in first – either verbally by the pool shop, or on the chlorine packaging.

“The pool had gone green and we went to the pool shop and were advised to do a shock, add an algacide and also a flocculent,” says Maynard.

“They said we’d need to use two kilos of chlorine. The bucket was the same one we always use for mixing chlorine, and the same mixing stick. We never use the bucket for anything else and there was nothing else in it at the time.”
